# V23HE7 PROJECTS

PROJECTS:

1. WIRELESS E-NOTICE BOARD.

2. ATTENDANCE SYSTEM IMPLEMENTATION USING RFID.

3. EXPLORING CAN FOR REAL TIME APPLICATIONS.

4. IOT BASED WEATHER REPORTING SYSTEM.

Skill set required to complete the project:

- C Programming
- Embedded C Programming
- ARM Classes concepts
    - Theory
    - Interfacing programs
        - GPIO Devices
        - on-chip peripherals
- Bus Protocol Classes concepts
    - Theory
    - Protocol based devices driver programs
        - I2C
        - SPI
        - CAN
- debugging skills
    - software
    - hardware
- Problem Identification skills
    - software
    - hardware
- Problem Solving skills
- How to get/analyze new concepts by refering the data sheet specifications
    - giving support for new device interface to ARM7
- Sample interface Program analyzation skills
    - giving support for new interface sample codes
- Proper planning
    - Time management
        - Daywise Schedule
            - LAB Time Schedle
            - Free Time Schedule (Apart from VECTOR class and lab time)
- Explanation skills

Extra interfacings to be learned:

GSM
4 Multiplexed DOT MATRIX LED Display
RFID Reader
WiFi Module
DHT11 Sensor
