Aptitude.

- By Sunil Guptha Yarramalla

→ 1) What is Aptitude?

↳ Aptitude is nothing but 'Natural Talent' (or) "Natural Ability" (or) "Common Sense".

↳ Means "Based on situation how you respond" (or) "According to situation how your brain react".

→ 2) Purpose of Conducting Aptitude Written Test?

↳ To test your brain capability in showing your "natural talent" (or) how good you are in showing your "Common Sense".

→ 3) What are the concepts of Aptitude?

↳ Aptitude into 3 sections totally in general.

(i) Quantitative Aptitude. ——
(ii) Logical / Reasoning Aptitude. —— → By me
(iii) Verbal / Communication Aptitude. → By Satish

↳ (i) Quantitative Aptitude is again categorized into sub concepts like Number Sys., %'s, P&L, T&W ... etc

↳ Logical Aptitude like coding & decoding, BR, Directions

→ 4) Why only Quantitative Aptitude & Logical Aptitude concepts under Aptitude written test?

↳ In real time lively situations only your aptitude levels are tested mainly.

(2)

↳ Where and which scenarios your aptitude levels are to be utilised, those scenario's & situations are to be considered as concepts of 'aptitude'.

Ex:- (i) If you go to "Big Bazar" and have seen a discount board & purchased some groceries, then after discount ~~how much~~ to know how much you have to pay to the shop keeper. To know about that you must know % & Profit & loss.

(ii) If you go to a function, there one person is to be introduced by father of yours like "he is brother of mother of your mother". To know this relation as your grand-father, you must know Blood Relations.

↳ Like to apply your common sense levels in the above kind of situations, few particular concepts only introduced under Aptitude.

(3) Difference b/w Logic / formula / Short cut ? (or) what are logic (Technique), formula and Short cut ?

↳ Applying a methodology / a particular procedure to a proper problem in a proper way keep on continuesly in such a way that the methodology is stored in our brain permanently (will be used afterwards quickly) is called "logic" (or) "technique".

↳ After keep on continuous practices, the conclusions will be given with 'n' no. of constants is 'formula'

(3)

↳ "formula" is also a indirect logic (practiced by others and used by us without understanding method and practice).

Conclusion:- Remembering formula will make you lazy and conceptless and logicless. The danger thing about formula is "if you are in tension you may not remember exact formula, so that obvio-usly answer may worong.

↳ Short cut is nothing but the conclusion after practi-cing a problem in 'n' no. of way to find a simple and less time taking solutions.

★ Finally the source for all the above '3' is practice. "Practice makes human perfect".

↳ Test for your common sense level:- [To crack in short span of time

(1) How can you calculate 26×27 ?

↳ Generally:-

```
  26   ×1
  27
------
 182
 52X
------
 702
------
```

But takes more time

With common sense:-

$26 \times 27 = 26(26+1)$

$= 26^2 + 26$

$= 676 + 26 = 702$
