Directions:-

Vector India Pvt. Ltd.

↳ By Sunil Guptha Yarramalla.

↳ The purpose of reasoning direction concept is to find out the destination with given directions.

↳ The Basic Directions Mapping diagram is:-

↳ The angular difference b/w any 2 consecutive main directions ① is always 90°.

↳ The angular diff b/w any two consecutive sub directions ② is also 90

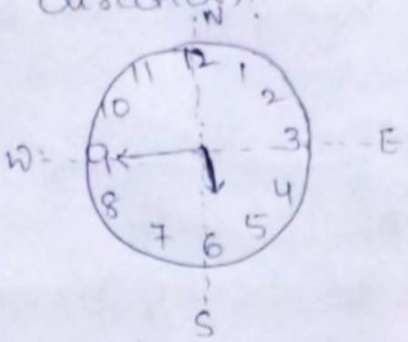

↳ The angular diff b/w any 2 consective main & sub directions is ③ always 45°.

↳ In directions always direction mapping is indicated with '→' mark to get the clarity in doing solution.

↳ In finding angular difference, clockwise rotation is with '+' sign & anti-clockwise rotation with '-ve' sign.

↳ Clock based direction questions are also asked in this concept.

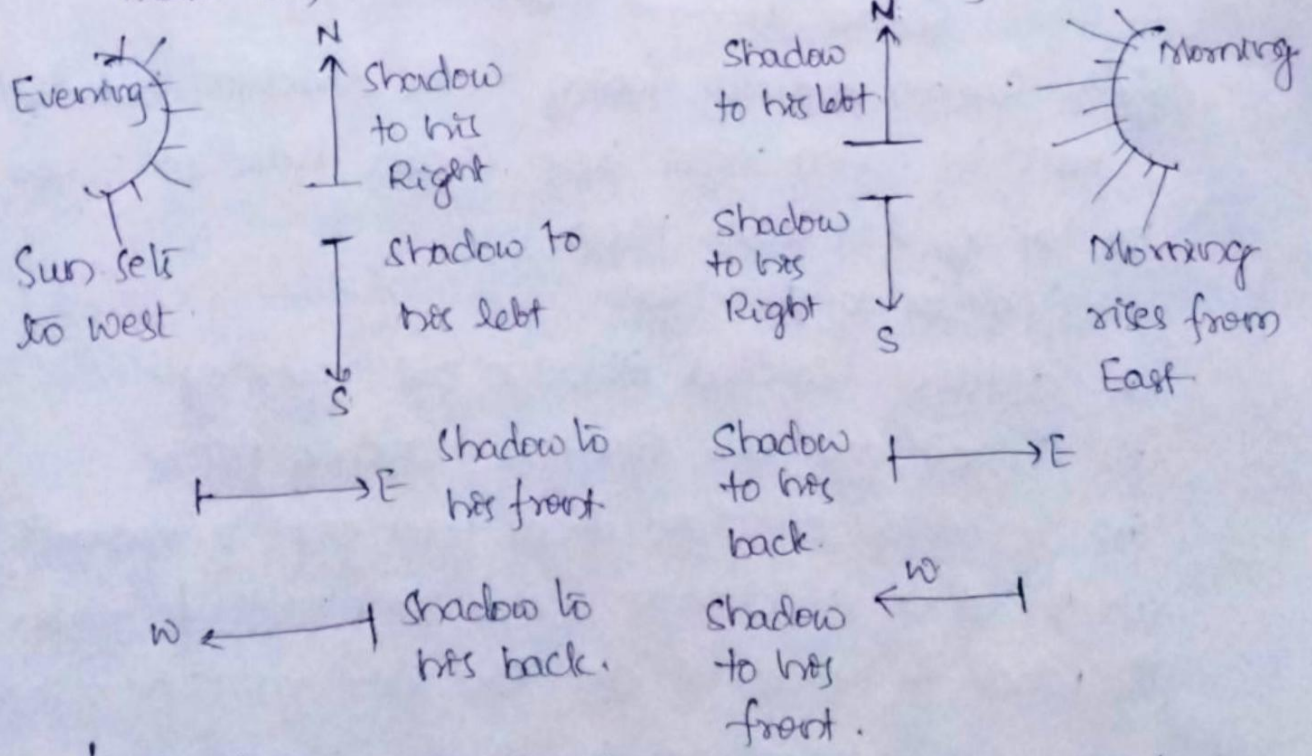

Ex-1:- A clock shows 5:45. @ this time minutes hand is on west direction, then hr's hand is which direction?

From the figure by giving direction map to clock, we can conclude the hr's hand is on b/w S & E so, South-East direction.

↳ Shadow Problems:- Shadow based problems on directions mainly with respect to sun momentum. like appearing of shadow to the person when sun rises in which direction.

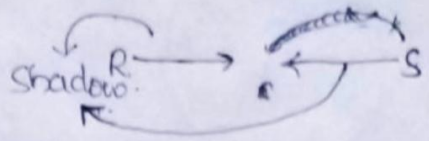

↳ At exactly @ noon [12 pm] sun rays falls on our head. So, there is no shadow @ exactly 12 noon.

↳ Based on person standing position west sun his shadow falls.

Ex:-2:- In the park at fine evening Ramu & Seetha are talking to each other [face to face], the shadow of seetha falling back side to Ramu then facing directions of them are?

Ans:- As of description qn.

problem, Seetha shadow falls towards back side of Ramu in the evening, means even Ramu's shadow also falls backside to him only.

↳ According to reference diagram in the evening when person facing west then only his shadow falls to his back side. Means Ramu facing west side then Seetha facing in East direction

Seetha ⟵ E W ⟵ Ramu

Ex:-3:- Suman initially facing north direction, travelled 12 km's by taking right turn, again travelled 5 km by taking left turn then.

(i) Final facing direction.

(ii) distance travelled through out journey.

(iii) Shortest dist b/w starting & ending points.

(iv) In which direction final point w.r.t to initial?

(v) In which direction is initial point w.r.t to final.

(vi) what is horizontal dist b/w starting & ending points.

(vii) what is vertical dist b/w starting & ending points?
