(170)

Ans:-

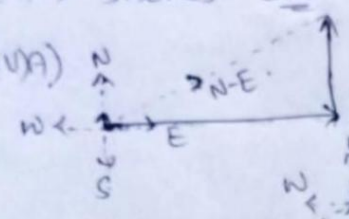

(ii A) Finally facing North

(iii A) Total dist travelled = 12+5=17.

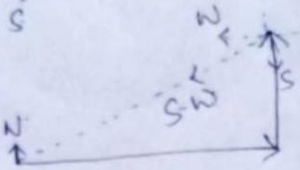

(iii A) Shortest dist = $\sqrt{12^2+5^2} = \sqrt{144+25} = \sqrt{169} = 13$ kms

(iv A)

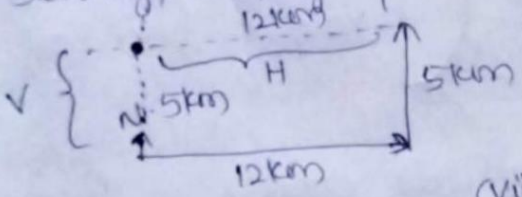

Final point is N-E direction w.r.t Initial point.

(v A)

Initial point is S-W direction w.r.t final point.

(vi A) To find out horizontal/vertical distances b/w starting & ending points, we have to extend vertical line horizontally & horizontal line vertically then we can find point of intersection of them. From point of intersection to starting/Ending points dist is called Vertical/Horizontal.

(vi) A) Horizontal.
distance = 12km.

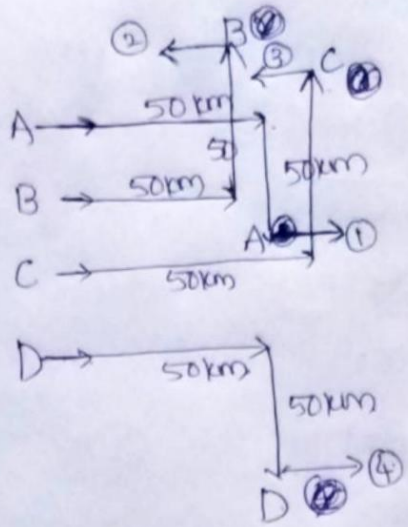

(vii) A) Vertical distance = 5 km.

Booklet Questions:-

Ex:-4- [B.Q:-2]:- Four aeroplanes of Airforce A, B, C & D started for Demo towards east. After flying 50km planes A & D flew towards right, planes B & C flew towards left. After 50 km, planes B & C flew towards their left, planes A & D flew towards their left. In which direction are the aeroplanes A, B, C & D respectively flying now?

(171)

Ans:-

Final Facing directions of planes A, B, C & D are

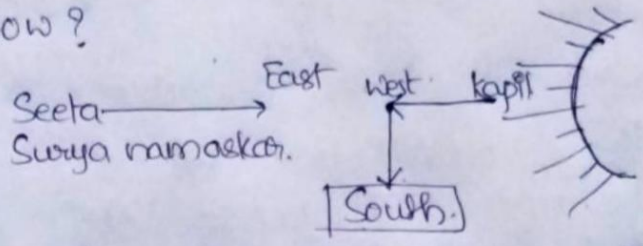

A → East

B → west

C → west

D → East

Ex: 5:- [B.Q:-4]:- One fine morning on his morning walk, kapil noticed seetha who was doing surya namaskar facing the raising sun. He went to her, greeted her good morning & took a left turn. In which direction, is he walking now?

To wish seetha kapil should walk opposite to facing of seetha (Opposite to East), means initially kapil walking towards west after wishing takes left turn means now facing 'South'.

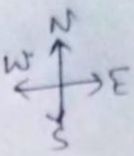

Ex:6:- [B.Q:-5]:- Two squads of soldiers A & B, facing East & west respectively received the following commands – left Turn, About turn, Right turn, left turn which direction would the squads A & B face at the end?

(172) Ans:-

Squad A:- → ↑ ↓ ← ↓

→ ↑ ↓ ← ↓

→ ↑ ↓ ← ↓

Initially East. Left turn about turn Right turn Left turn

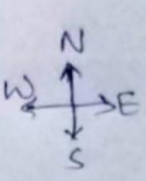

final facing direction is 'South'

Squad B:- ↓ ↑ → ↑

← ↓ ↑ → ↑

← ↓ ↑ → ↑

← ↓ ↑

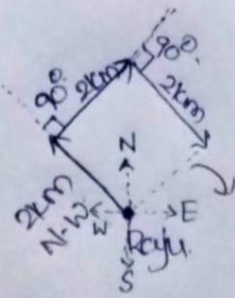

Initially west Left turn About turn Right turn Left turn

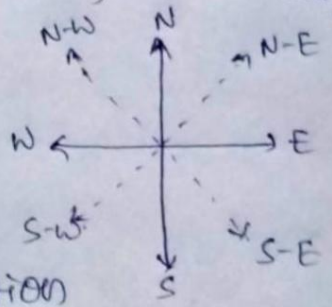

Finally Squad 'B' facing in the 'North' direction

Ex:-7:-[B.Q:-8]:- Raju moved to his north-west side for 2km. From there he turned 90° clockwise and moved 2km. From there he turned 90° clockwise & travelled 2km. then he would be in which direction from the original position?

Ans:-

North-East direction

Finally he would be in north-east direction from original position.
