SEATING ARRANGEMENT (or)
ANALYTICAL REASONING. (or)
PROBLEM SOLVING.

↳ VECTOR INDIA PVT. LTD.

↳ By Sunil Guptha Yarramalla

↳ Seating Arrangement mainly into 2 types:-

(i) Linear Arrangement
- → Row wise
- → Column wise
- ↳ Diagonal wise.

(ii) Closed shape Arrangement.
- → Circle
- → Rectangle & Rounded Retangle [Stadium]
- ↳ Square & Rounded square (Squarcle]

(i) Linear. Arrangement:- In linear arrangement first we must know all the cases in positions.

Ex:- A B C D E.

↳ We can say position of A in so many ways like. in Extreme left, immediate left to B, 1st left to B, 1st from left, 2nd left to C, 1st left to B and. 3rd left to D.

↳ we can say C as:- Exactly in the middle, in b/w B&D, in b/w [A&E, A&D, B&E], immediate left to D & immediate right to B, 3rd from left & 2nd left to E. ...

↳ In this fashion we must know all the ways the position of a person in row wise, then only we can able to do any question from seating Arrange-ment.

(209)

Ex:1:- 5 boys are sitting in a row. A is on the right of B, E is on the left of B, but to the right of C. If A is on the left of D. Who is sitting in the middle?

Ans:- C E (B) A D

Ex-2:- 5 boys standing in the form of ~~circle facing center~~ row wise. Ajay is b/w Ramesh & Domnic, Solomon is to the left of Babu. Ramesh is to the left of Solomon. Who is immediate Right of Ajay?

Ans:-

$\boxed{R\ A\ D}$ (or) D A R

S B S B

R S → Not possible. R. S → possible

→ wrong. D A (R) S B

Note:- 1) In row wise arrangement if total members is odd number of then only exactly middle possible otherwise (if even) exactly middle is not possible but middle is possible.

2) When statement is given like "C is left of A, who is ~~right~~ left of D" then 'C' is left of A applicable to C but ', who is left of D' is not applicable to C but applicable to A [because when ', who' is there after A, so its Applicable A by considering before ', who' who ever are there, to them only that statement (or) condition applicable.
