Data Structures

OBJECTIVE:

Here the objective is to understand more about singly linked list.

TASK:

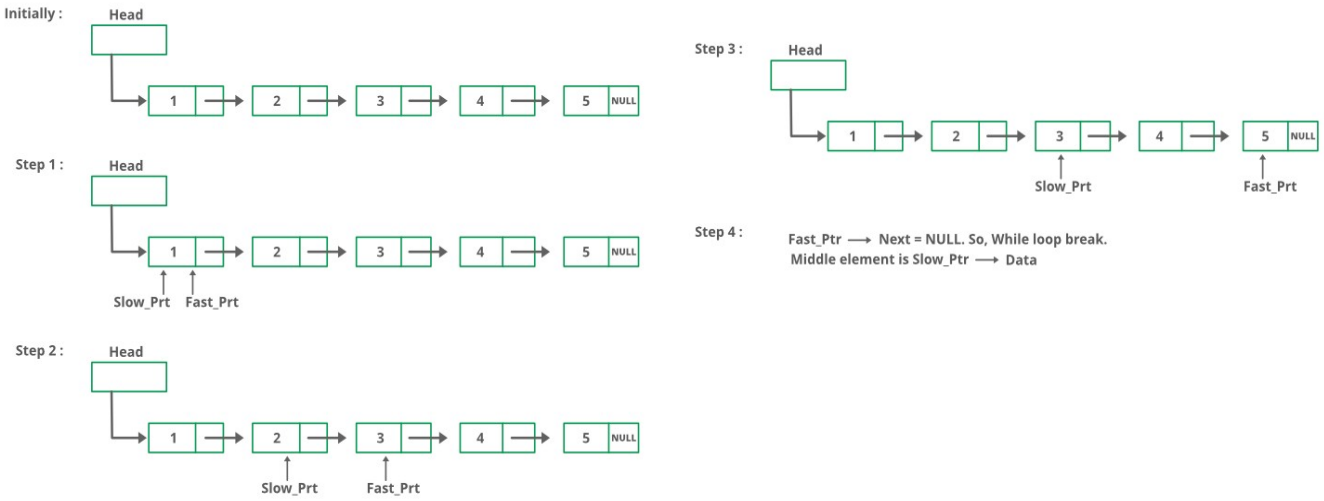

Write a program to implement the following functionalites on a Singly Linked List, With using make utility.

1.delallnodes()--->Delete all node of the linked list

2.print_middle_node_info()--> Print middle node information of a linked list in single traversal

->**HINT:** using slowpointer and fast pointer

For 2 example :

We will provide addlast() and print() functions.
