29/04

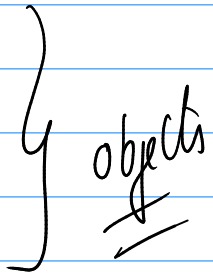

stack class
datamembers : array
top
member functions :
push
pop
peek

Array of objects

Classname arrname[size];

ex :
Rectangle arr[5]; // collection of Rectangle objects

arr[0]
arr[1]
arr[2]
arr[3]
arr[4]

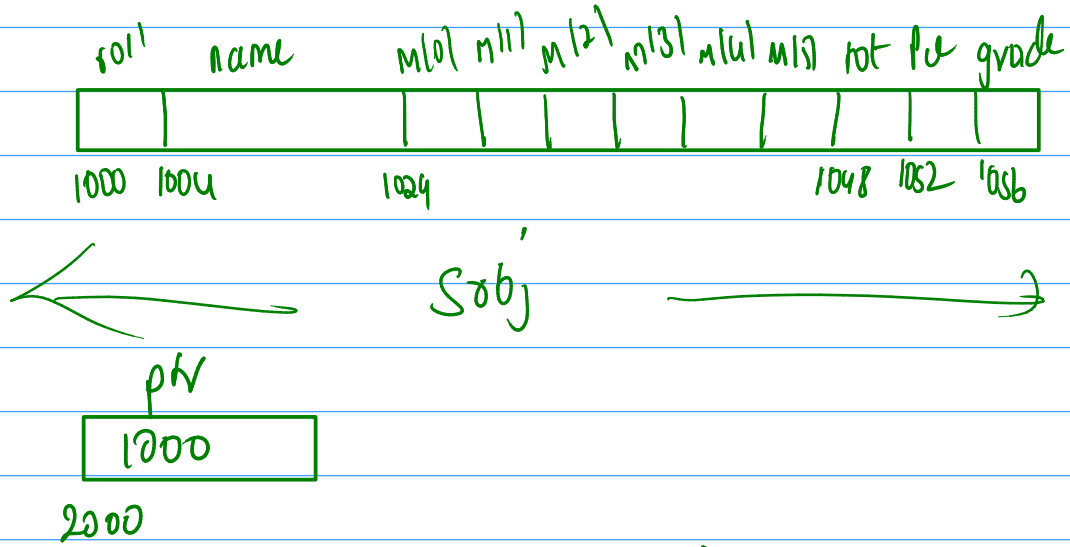

Pointer to an object:

classname *pointer;
Rectangle *ptr;
we use indirection operator(->)to access the members of class with pointer

Refer to Pointer to an object program

Student sobj;
Student *ptr;
ptr=&sobj;

ptr->SetData(); → (*ptr).SetData();

How do we copy from one object to another object

1. Assignment operator
2. Memmove or Memcopy
3. Member by member copy

How to do we compare
Member by Member
