3/05 Friend functions

friend function is non member of a class but got the permission to access the private and protected members of a class.

We can make
1. normal function as a friend to a class
2. member functions as a friend to a class
3. class as a friend

syntax to make normal functions as friend.

friend returntype funname(class obj);

declare function declaration with friend keyword in the class whose data we need to access

synatx to make member function as a friend

friend returntype class1name:: fun(class2obj);

friend void ABC :: Sum(XYZ &);

Sum which is member func of ABC is friend to XYZ class

We can make Above class member functions as a friend as well as class a friend.

But for below classes we can only make class as a friend.
