types of inheritance

1. single inheritance
2. multiple inheritance
3. heirarchical inheritance
4. multilevel inheritance
5. hybrid inheritance

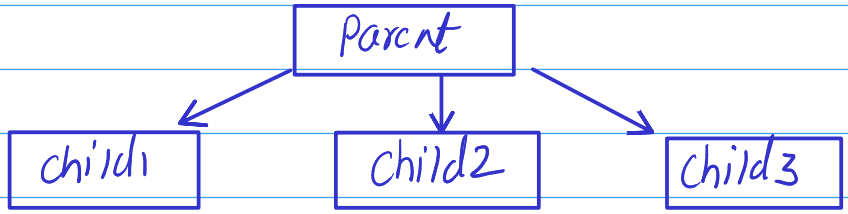

Single inheritance : if a single chils is derived from single parent class is called single inheritance.

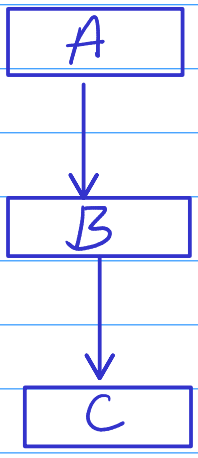

multiple inheritance : if a child is derived from more than one parent class , is called multiple inheritance

heirarchical inheritance : from a single parent more than one child is derived is called heirarchical inheritance.

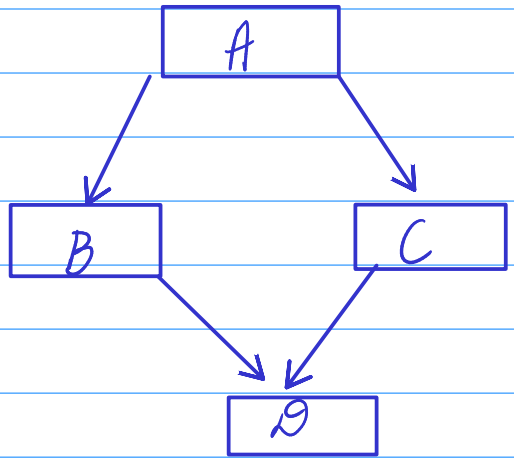

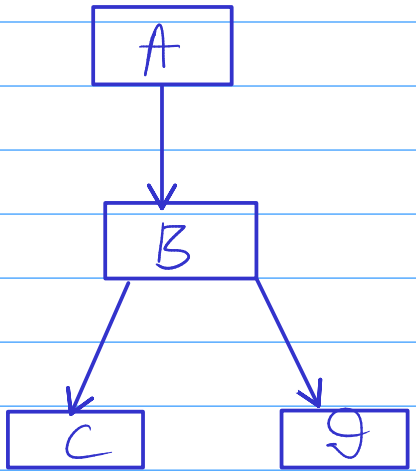

multilevel inheritance : if a class is derived from another derived class is called multilevel inheritance.

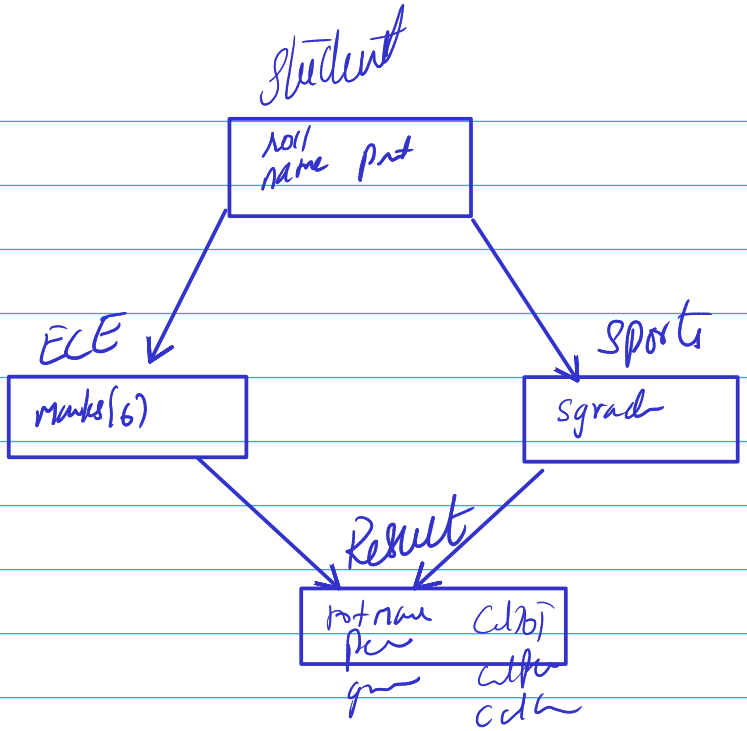

Hybrid inheritance : if more than one type of inheritance is combined then it leads to hybrid

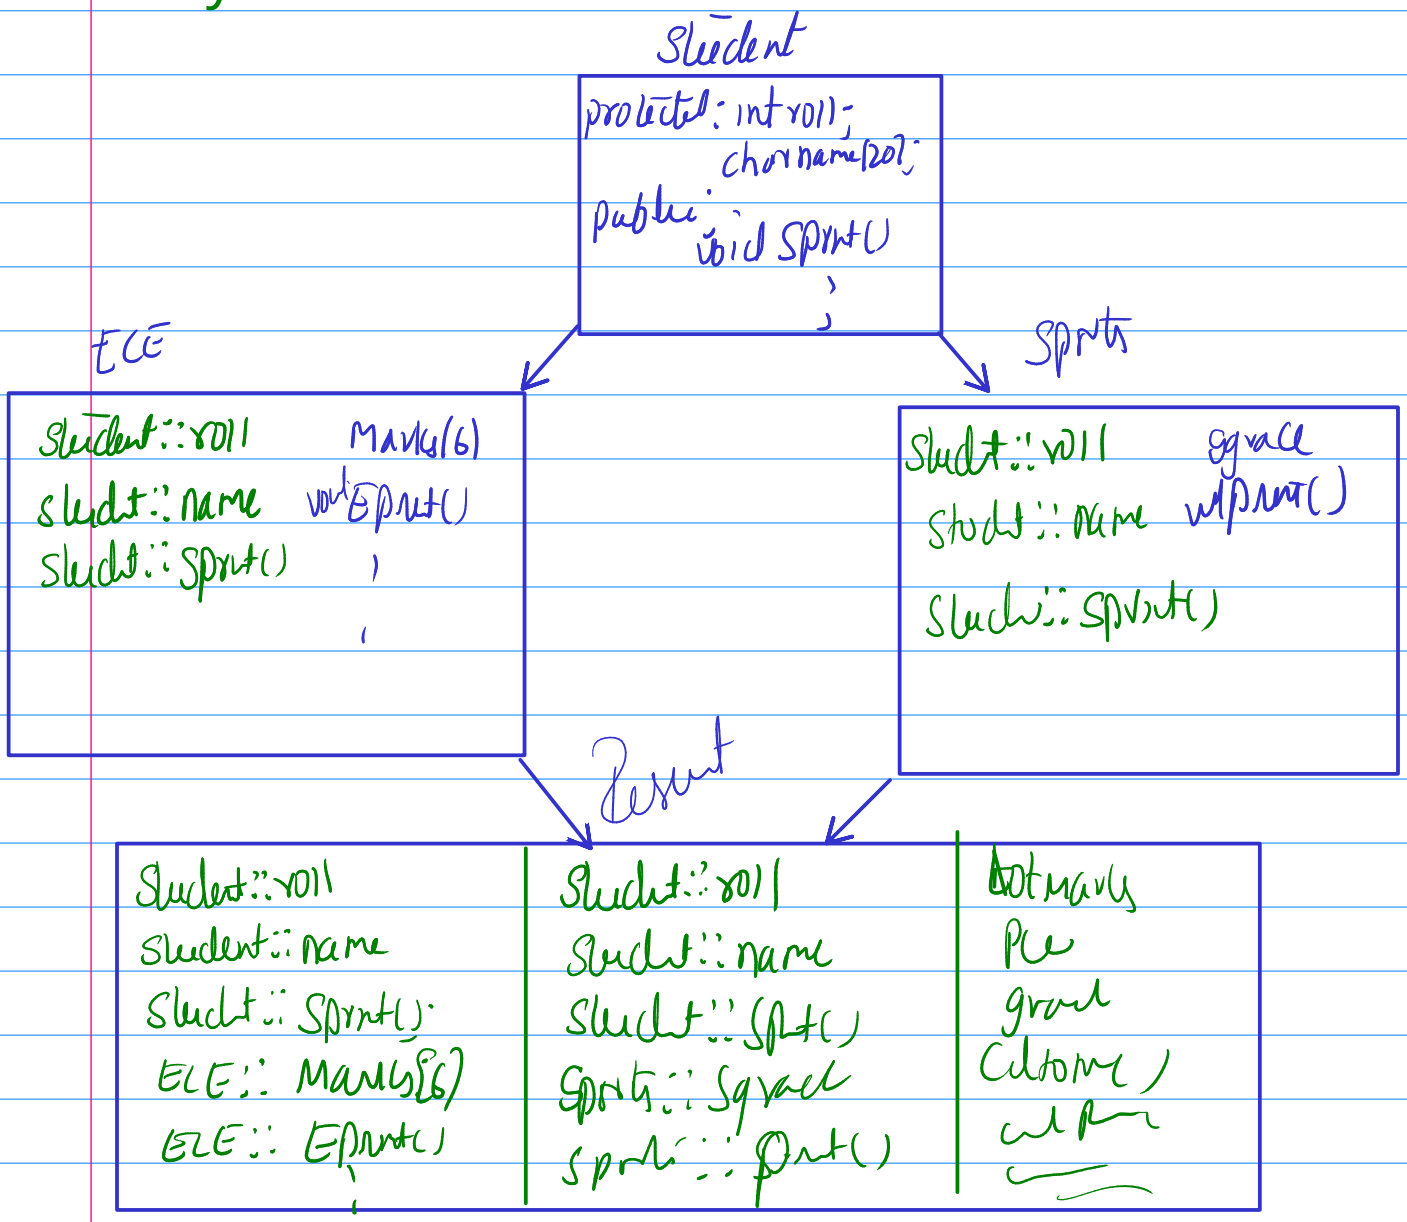

Diamond pattern or multipath

Why SPrint is Ambicous?

to avoid the ambiguity problem make main base class as virtual while it is getting inherited
