20/05

get and put for copy command

seekg(int offsetvalue,int whence)

default argument if we don't mention it take ios::beg

ios::beg
ios::end
is::cur

STL

standard templates Library , which is collection of predefined generic classes and generic functions

containers
iterators
algorithms

containers are collection of objects, which are implemented using generic classes.

algorithms are procedures to be applied on the objects of the containers

procedures means functions

iterators are objects like a pointers use to traverse among the objects of the containers

we have 11types of containers catergorised into 3 groups.

1. Sequential containers
   - array
   - vector
   - list
   - dequeue
2. Associative containers
   - map
   - multimap
   - set
   - multiset
3. Derived containers
   - stacks
   - queue
   - priority queue

   } indexed containers we don't have iterators
