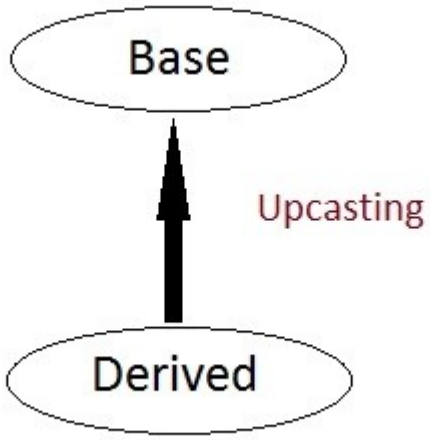
Upcasting :

Upcasting is using the Super class's reference or pointer to refer to a Sub class's object. Or we can say that, the act of converting a Sub class's reference or pointer into its Super class's reference or pointer is called Upcasting.



```
Class Super

{   int x;
    public:
    void funBase()
    {
        cout << "Super function";
    }
};

class Sub:public Super
{ int y;
};

int main()
{
    Super* ptr;    // Super class pointer
    Sub obj;
    ptr = &obj;

    Super &ref;    // Super class's reference
    ref=obj;
}
```
