OS → software component

PM FM MM IPC signal handling

Given no. prime or not ?

1) Low level programming
   - Device Driver
   - NW programming

2) To understand how the OS Services are working.

free (ptr) → How many bytes to be freed?

→ Why OS?
- Multiple jobs
- Memory management (VM)
- Security & protection

→ Accountability → maintaining the reports

Based on that suggestions are provided.

→ FM & PM

→ Synchronization mechanism

User Interface → CLI & GUI → Graphical user Interface.

Command Line interface

For debugging mostly we use CLI

Linux TCP/IP

ARM Bus prob

C & DS

+

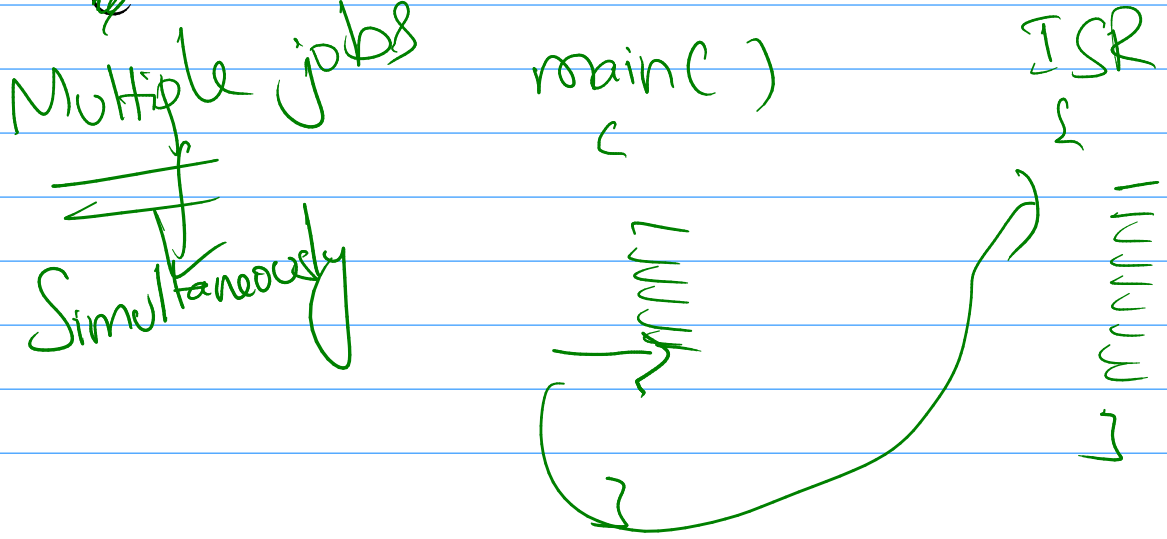

CPP

→ Eg:

Multiple jobs

≠

Simultaneously
