thread_creation

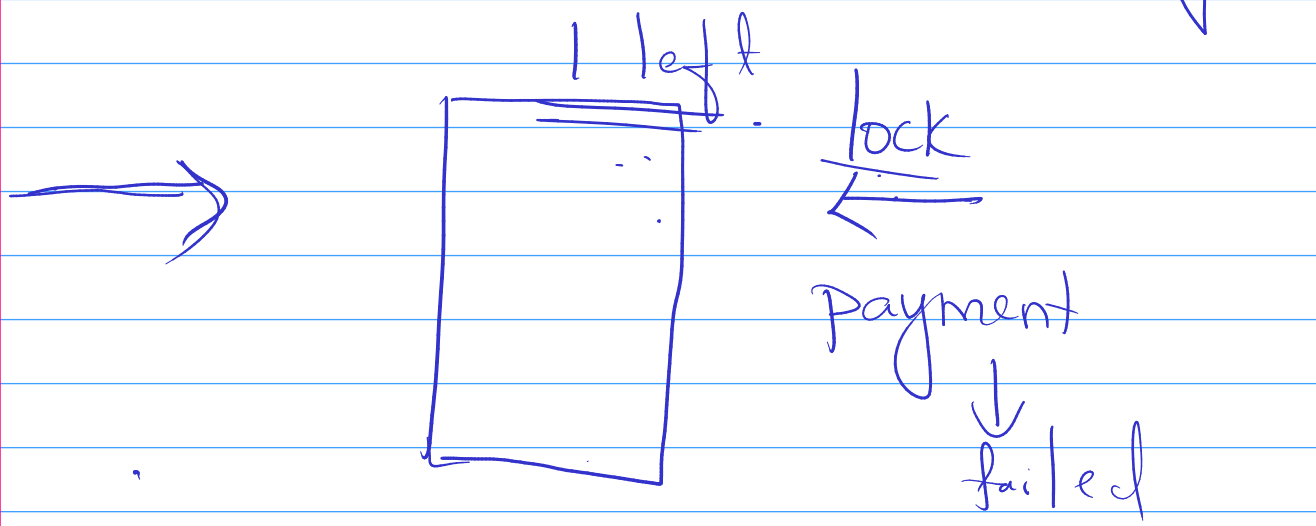

thread_defs

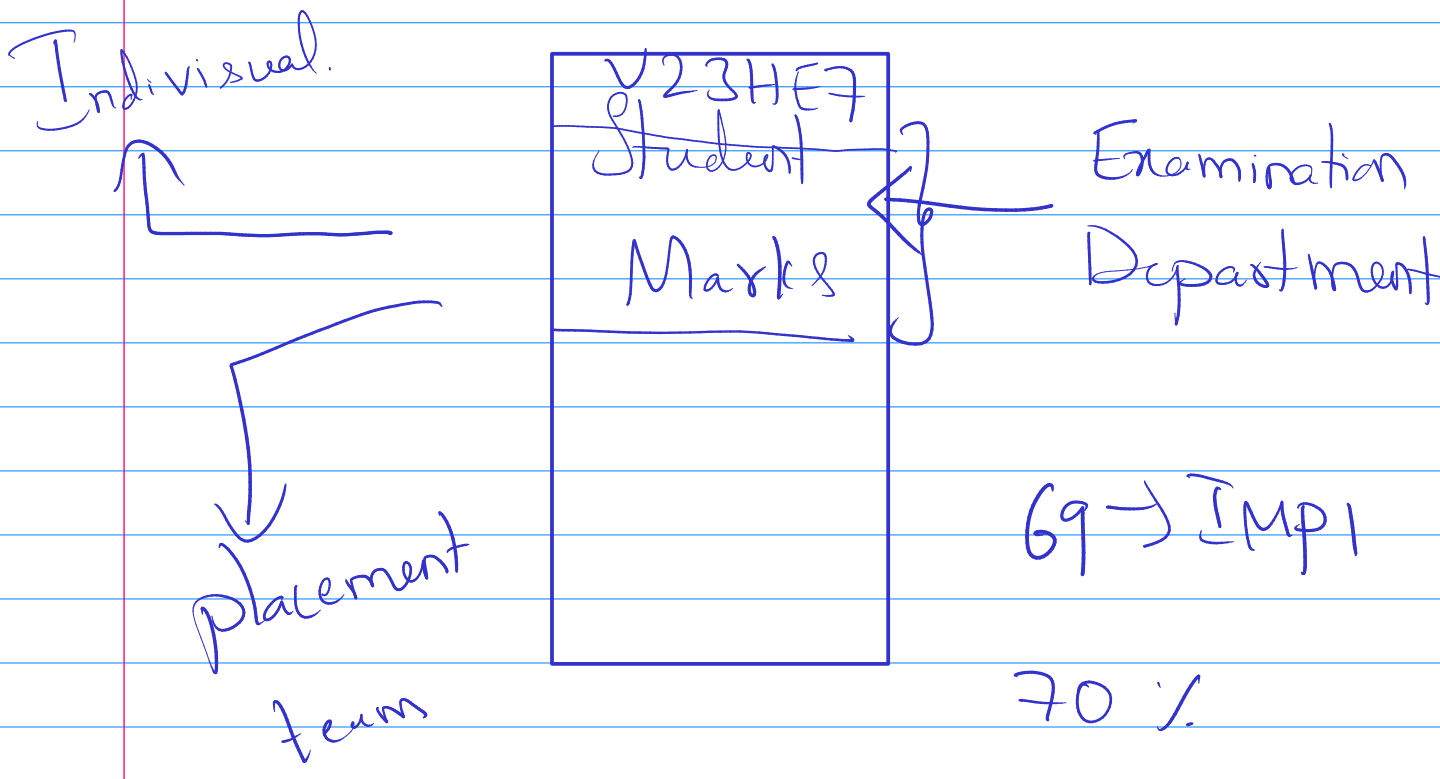

→ join < collecting exit status

exit

not collecting exit status

· Common Resource accessing :-

Critical Section :-

The block of code which access the common resource is called as Critical Section.
in multi threading environment.

Weather reporting

job1 job2

→ Read temp (Serial port1)
→ If resource not locked then lock
→ Excel doc
temp : ___ °C
resource unlock

Read humidity (Serial port1)
→ If resource is not locked then only lock
→ Excel sheet
Hum : ___
unlocked.

Spinlock
mutex
Semaphore
Record lock

} To Synchronize Common data like global var | peripheral (LCD, UART, ADC and etc.

(Only for Locking files)

Spinlock :-

int flag=0;

job1

```
while(flag!=0);
flag=1
=========
=========  } C.S.
flag=0
```

job2

```
while(flag!=0);
flag=1
=========
=========  } C.S.
flag=0;
```
