RL_Rtx :-

supports

1. priority based RR
2. Co-operative scheduling algo.

fork → SWI 1

open → SWI 2

SWI

context saving

1. next instr^n addr
2. CPSR → SPSR
3. CPSR : mode bits → supervisor mode

④ PC → SWI Vector Addr

0X08

1 — Servie Routine 1

2 → Servie Routine 2

Servie Routine 1

Servie Routine 2

Ret

In RL-RTX

priority levels

0 - 255

(Lower is the number the lower is the priority)

0 → Idle Task

1-254 → available for User Task

255 → to the highest priority job.

RL-RTX is a traditional RTOS.

LPC2148

RL-RTX → Timer 0

Appln → Timer 0
